

Following a degree in Applied Physics at University of Science and Technology of China (USTC, 2011), I got a PhD degree majored in space physics at National Space Science Center, CAS, under the supervision of Prof Fengsi Wei.

I accepted a post-doctoral position in 2020 at State Key Laboratory of Lunar and Planetary Sciences, Macau University of Science and Technology. Currently I am an assistant professor at MUST. My research interests are interplanetary coronal mass ejections (ICMEs) and energy dissipation processes in the solar wind such as magnetic reconnection, turbulence cascade, and slow mode shocks in the solar wind.

PhD: Space Physics
National Space Science Center, CAS

Degree: Applied Physics
University of Science and Technology of China
