

Following a Bachelor degree in Electronic Information in 2012, I began my space science research as a Master/PhD student supervised by Prof. Zhengyu Zhao and Prof. Binbin Ni, at the Laboratory of Magnetospheric Space Weather and Effects (LMSWE) in Wuhan University, Wuhan, China.

After obtaining a PhD degree in Space Physics, I accepted a post-doctoral position in 2018 at Institute of Space Science and Applied Technology (ISSAT) in Harbin Institute of Technology, Shenzhen (HITSZ) and investigated the dynamics of radiation belt particles and plasma waves.

In 2020 I was offered a position as an assistant professor at the SKL of Lunar and Planetary Sciences in M.U.S.T in Macao, China. By using both traditional research approaches and machine learning algorithms, I have been studying the temporal evolutions of the energetic electrons and wave-particle interactions in Earth radiation belt. I am also teaching a number of post-graduate courses.
